

**Drilling at Cumavici Ridge**

**Colloform-crustiform sphalerite-galena vein**

## Zinc and Manganese ZScoreSUM Soil Geochemistry

### Technical Notes

*> 7 km NW/SE mineralized corridor*

*Kilometer scale soil geochemistry anomaly of Ag-As-Pb-Mn-Zn*

*Polymetallic intermediate sulphidation epithermal mineralization*

*Numerous untested massive sulphide occurrences*

*Drill results of 505 g/t AgEq over 11 m*

*Mineralization open along strike and down dip*

*Drill intervals as shallow as 11 m downhole*

*Fault-hosted veins dipping 30-45 degrees to the SW*

*(WGS84 / UTM Zone 34N)*
